

# Overview: Measuring splicing using RNA-seq data

# Types of alternative splicing events

# Differential splicing analysis pipeline steps

1. Read trimming
2. Read mapping to ref transcriptome or de novo transcriptome
3. Assigns groups for rMATS comparison
4. Run rMATS
5. Filter significant events, correct gene names
6. Generate output tables

# Differential splicing analysis pipeline output

Two outputs:

1. Using reference (Gencode) transcriptome \*\_Ref
2. Using de novo transcriptome \*\_Novel

→ **Filtered files** contain only the significant events differentially spliced between case and control

→ **Unfiltered files** contain all the events detected

→ **Summary table** – number of significant events per event type

→ **Bigwig files** for read coverage for visualization using UCSC browser or IGV

# Differential splicing analysis output (Filtered files)

## Long ID for AS events\*

**SE**; chr;strand; [E2] Start;End; [E1] Start;End; [E3] Start;End  
**A3SS**; chr;strand; [E2-E3] Start;End; [E1] Start;End; [E3] Start;End  
**A5SS**; chr;strand; [E1-E2] Start;End; [E1] Start;End; [E3] Start;End  
**MXE**; chr;strand; [E2] Start;End; [E3] Start;End; [E1] Start;End; [E4] Start;End  
**RI**; chr;strand; [E2] Start;End; [E1] Start;End; [E3] Start;End  
*\*Exon coordinates are from left to right. regardless of gene orientation*

## short ID for AS events\*

**SE**; chr;strand; [E2] Start;End; [E1] End; [E3] Start  
**A3SS**; chr;strand; [E2] Start;End; [E1] End; [E3] Start  
**A5SS**; chr;strand; [E2] Start;End; [E1] End; [E3] Start  
**MXE**; chr;strand; [E2] Start;End; [E3] Start;End; [E1] End; [E4] Start;  
**RI**; chr;strand; [E2] Start;End; [E1] End; [E3] Start;  
*\*Exon coordinates are from left to right. regardless of gene orientation*

## PSI Calculation

# Differential splicing analysis output (Filtered files)

1. Type of alternative event

3. Gene name

16. Average PSI control

17. Average PSI case

18.  $\Delta$ PSI (Case-Control)

/ >0 more included, <0 more skipped

5-8. Reads supporting inclusion or skipping for control (1) and case (2) for each replicate

9-10. PSI for control (1) and case (2) for each replicate

30. Event ID and sequences for BLAST

Header	Description
Event type	Type of event: SE (skipped exon or cassette exon), RI (retained intron ), A3'SS (alternate 3' splice site or AA), A5'SS (alternate 5' splice site or AD) or MXE (mutually exclusive exon or MX)
Short ID	Short ID of DSEs, nomeclature include event type and 5'-3' coordinate of spliced sequence.
Long ID	Unique ID of DSEs, nomeclature include event type and 5'-3' coordinate of spliced sequence.
GeneName	Official gene symbol
ENSEMBL_ID	ENSEMBL ID
strand	strand (+) or (-)
IC1	Read counts that support inclusion of a spliced region for each biological replicate separated by ";" in control
SC1	Read counts that support skipping of a spliced region for each biological replicate separated by ";" in control
IC2	Read counts that support inclusion of a spliced region for each biological replicate separated by ";" in case
SC2	Read counts that support skipping of a spliced region for each biological replicate separated by ";" in case
PS1	Percent Spliced In or inclusion level for each biological replicate separated by ";" in control
PS2	Percent Spliced In or inclusion level for each biological replicate separated by ";" in case
mIC1	Mean IC1
mSC1	Mean SC1
mIC2	Mean IC2
mSC2	Mean SC2
mPSI1	Mean PSI1
mPSI2	Mean PSI2
dPSI (2-1)	difference in PSI (PSI2 - PSI1)
P-value	rMATS P-value
FDR	rMATS false discovery rate
E1	genomic coordinates for the 5' end of the upstream exon; 3' end of the upstream exon
E2	genomic coordinates for the 5' end of the spliced region; 3' end of the spliced region (for MXE event, this is the first mutually exclusive exon)
E3	genomic coordinates for the 5' end of the downstream exon; 5' end of the downstream exon (for MXE event, this is the second mutually exclusive exon)
E4	genomic coordinates for the 5' end of the downstream exon; 3' end of the downstream exon for MXE event
S1	upstream exon sequence
S2	spliced exon sequence
S3	downstream exon (for MXE this is the second exon)
S4	downstream exon sequence for MXE
MIN_RECIPRO	Filtering (1 Yes, 0 No) for min 5 reads for IC1 OR IC2 AND 5 reads for SC1 OR SC2
genome	version of reference genome assembly
BLAT	fasta formatted event ID and sequences of E1-E2-E3-E4

# Visualizing RNA-seq bw files on UCSC genome browser

**1) Create bw files with UCSC coordinates** (e.g., "chr1" instead of "1")

**2) Transfer files to JAX FTP server**

- connect using WinSCP via SCP or SFTP protocol
- server: [jaxbhftp02.jax.org](http://jaxbhftp02.jax.org)
- login: anczukow-lab
- password: 5DSgc4c0aYaGk24gQOLAqgZb
- copy files to folder
- check that you see files here: <ftp://ftp.jax.org/anczukow-lab> and right click to copy link location

**3) Load files to UCSC genome browser**

- Login to UCSC- create login if needed
- MyData>CustomTracks
- For each bw file add the name and ftp location:

```
track type=bigWig name="Sample_Name" description="Sample_description" color=0,51,204  
bigDataUrl=ftp://ftp.jax.org/anczukow-lab/file\_name.bw
```

# Visualizing RNA-seq bw files on UCSC genome browser

- Color examples:
  - blue: color=0,51,204
  - red: color=179,0,0
  - green: color=0,102,0
  - purple: color=89,0,179
  - other [https://www.w3schools.com/colors/colors\\_picker.asp](https://www.w3schools.com/colors/colors_picker.asp)
- Submit and add custom track
- More here: <https://genome.ucsc.edu/goldenpath/help/bigWig.html>

## **4) Save and share the tracks**

- MyData>MySession
- Add name and save session
- Share session with collaborators.

## **5) BLAT the sequences from filtered table**
